

Scale variables

Using standard deviation units makes everything simpler

Model with only treatment

```
df$Grazing0 = ifelse(df$Grazing ==  
"Ungrazed", 1, 0) # numeric coding  
  
m1 = quap(alist(  
  Fruit ~ normal(mu, sigma),  
  mu <- a + b*Grazing0),  
  data = df)
```

```
> precis(m1, prob = 0.95)  
      mean    sd  2.5% 97.5%  
a      0.32 0.21 -0.09  0.72  
b     -0.66 0.30 -1.23 -0.06  
sigma  0.97 0.12  0.77  1.22
```
